SUMMARY

Software engineer and technical owner of the .NET platform behind Rheem Manufacturing's parts operations. Sole engineer on its on-prem-to-Azure migration, designer of its authentication and API layer, and technical lead for two client-side engineers. U.S. Air National Guard veteran.

TECHNICAL SKILLS

Languages / Frameworks: C#, VB.NET/VB6, Python, SQL/T-SQL, JavaScript, ASP.NET Core Razor Pages, Entity Framework Core, Chart.js, .NET Framework 4.0 → .NET 8/9

Cloud & DevOps: Azure (VMs, Blob Storage, Azure SQL, Bastion), AWS S3, IIS, Azure DevOps (Pipelines, Repos, Boards), YAML multi-stage CI/CD, self-hosted build agents

Architecture & Auth: OAuth2, JWT issuance & validation, Microsoft SSO / Entra ID, ASP.NET Identity, dependency injection, custom middleware, distributed caching, background job processing, structured logging

EXPERIENCE

Software Engineer 2 — Simplicity Software (contracted to Rheem Manufacturing)

Feb 2023 – Present

- **Sole engineer on the platform's full on-prem-to-Azure migration.** Consolidated **5 production databases** into one, rebuilding the schema and rewriting every dependent C# call site and stored procedure ahead of cutover.
- Stood up **DEV and PROD in Azure** (four application servers plus build agents) with Rheem's infrastructure and network teams, built a nightly on-prem-to-Azure SQL sync for the phased cutover, and migrated asset storage from **AWS S3 to Azure Blob Storage**.
- Enabled **horizontal scaling** by moving shared state off individual servers: centralized encryption keys in Azure Blob and added SQL-backed distributed caching so user sessions survive restarts, deployments, and failover.
- Consolidated **100+ standalone console applications** into a single parameter-driven .NET project running on **100+ scheduled pipelines**, replacing ad-hoc manual runs with auditable, logged automation. Authored the platform's YAML multi-stage CI/CD pipelines.
- Rebuilt authentication to support **three login paths** (legacy OAuth2, ASP.NET Identity, and **Microsoft SSO / Entra ID**) and designed the API service layer for Rheem's distributor platform, with centralized token handling and automatic re-authentication.
- Built a token-bridging layer with per-user concurrency control to keep a legacy API available through an identity provider transition; now retiring it by replacing the remaining legacy calls.
- Lead development on the three systems the warehouse runs on daily: receiving & fulfillment (~**1M parts** processed since launch), shipping label generation with multi-team approval, and a Chart.js reporting dashboard.
- Modernizing a codebase dating to **2008**: converted legacy VB applications to C#, rebuilt several as Razor Pages that retired standalone tools, and leading the API migration to **.NET 8/9**.
- Cut page load times by **30–40%** on high-traffic pages by eliminating redundant database round trips and adding route- and query-level caching.
- Technical lead for two client-side Rheem engineers and primary technical contact across Rheem: assign work in Azure DevOps Boards, review all changes through pull requests and branch policy, and present architecture decisions to product, warehouse, and IT leadership.

Project Engineer — TransPerfect

Sep 2022 – Feb 2023

- Wrote Python automation scripts testing voice-assistant response quality on mobile devices against simulated commands.

Aerospace Ground Equipment Technician — Air National Guard

Sep 2014 – Mar 2021

- Maintained and repaired ground support equipment (diesel generators, mobile lighting units) while attending school full-time.

EDUCATION

University of Missouri-Kansas City — B.S. Computer Science, 2022
